CRAFTMYPLAN

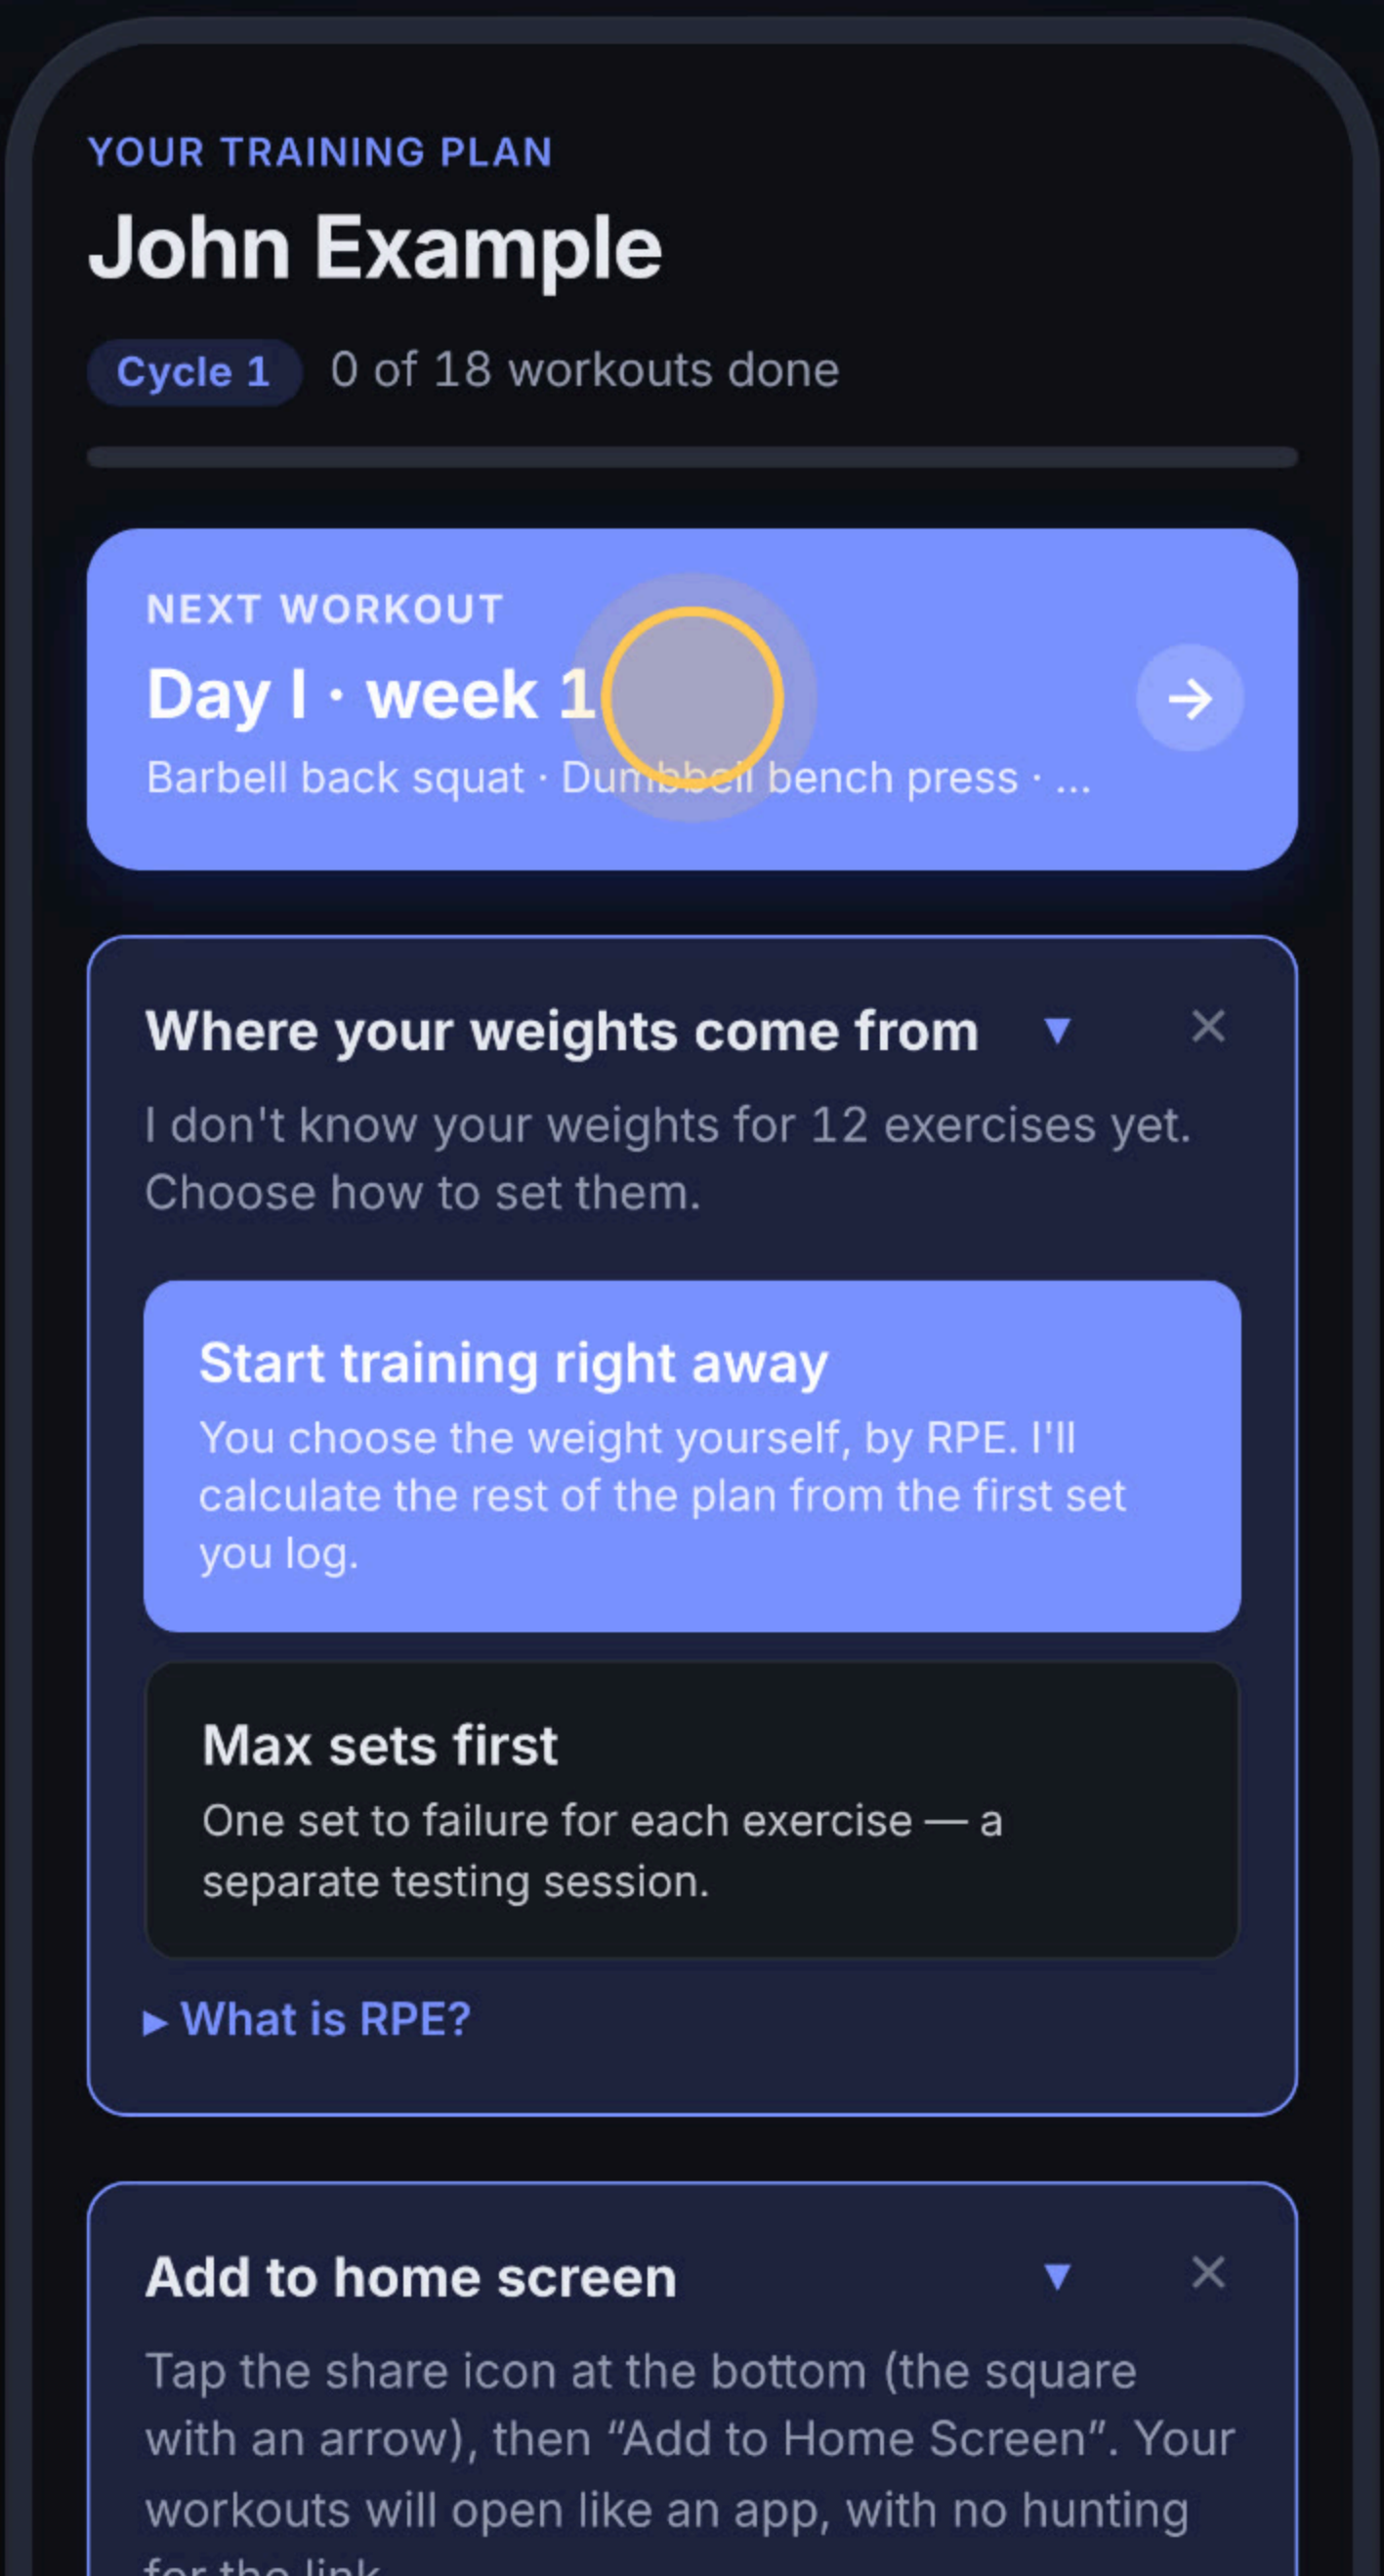

Your training plan on your phone

One minute on how to open your plan, do a workout and let your coach know how it went.

Open the link from your coach

This is your plan for the whole cycle. Your next workout is always waiting at the top — tap it to start.

Add it to your home screen

iPhone: share icon → “Add to Home Screen”.
Android: menu ⋮ → “Add to Home screen”.

Where your weights come from

Start right away and choose the weight by RPE — or do max sets first.

Barbell back squat · Dumbbell bench press · ...

Where your weights come from ▼ ×

I don't know your weights for 12 exercises yet. Choose how to set them.

Start training right away
You choose the weight yourself, by RPE. I'll calculate the rest of the plan from the first set you log.

Max sets first
One set to failure for each exercise — a separate testing session.

▸ What is RPE?

Add to home screen ▼ ×

Tap the share icon at the bottom (the square with an arrow), then “Add to Home Screen”. Your workouts will open like an app, with no hunting for the link.

WEEKS OF THE CYCLE

Week 1 of 6 ▼
0 of 3 workouts

What is RPE?

How many reps you have left in reserve. RPE 8 is a set after which two more clean reps would still be possible.

One set to failure for each exercise — a separate testing session.

▾ What is RPE?

RPE tells you how hard a set should be. The easiest way is to count the reps you have left in reserve — how many more you could do cleanly if you didn't stop.

RPE 10	nothing in reserve — you couldn't do another
RPE 9	1 in reserve
RPE 8	2 in reserve
RPE 7	3 in reserve
RPE 6	4 or more

Halves sit in between: RPE 7.5 means 2–3 in reserve.

Example: “8 reps · RPE 8” — a weight where after the eighth rep you feel you could still do two more. Too light? Add weight on the next set and log it — I'll recalculate.

WEEKS OF THE CYCLE

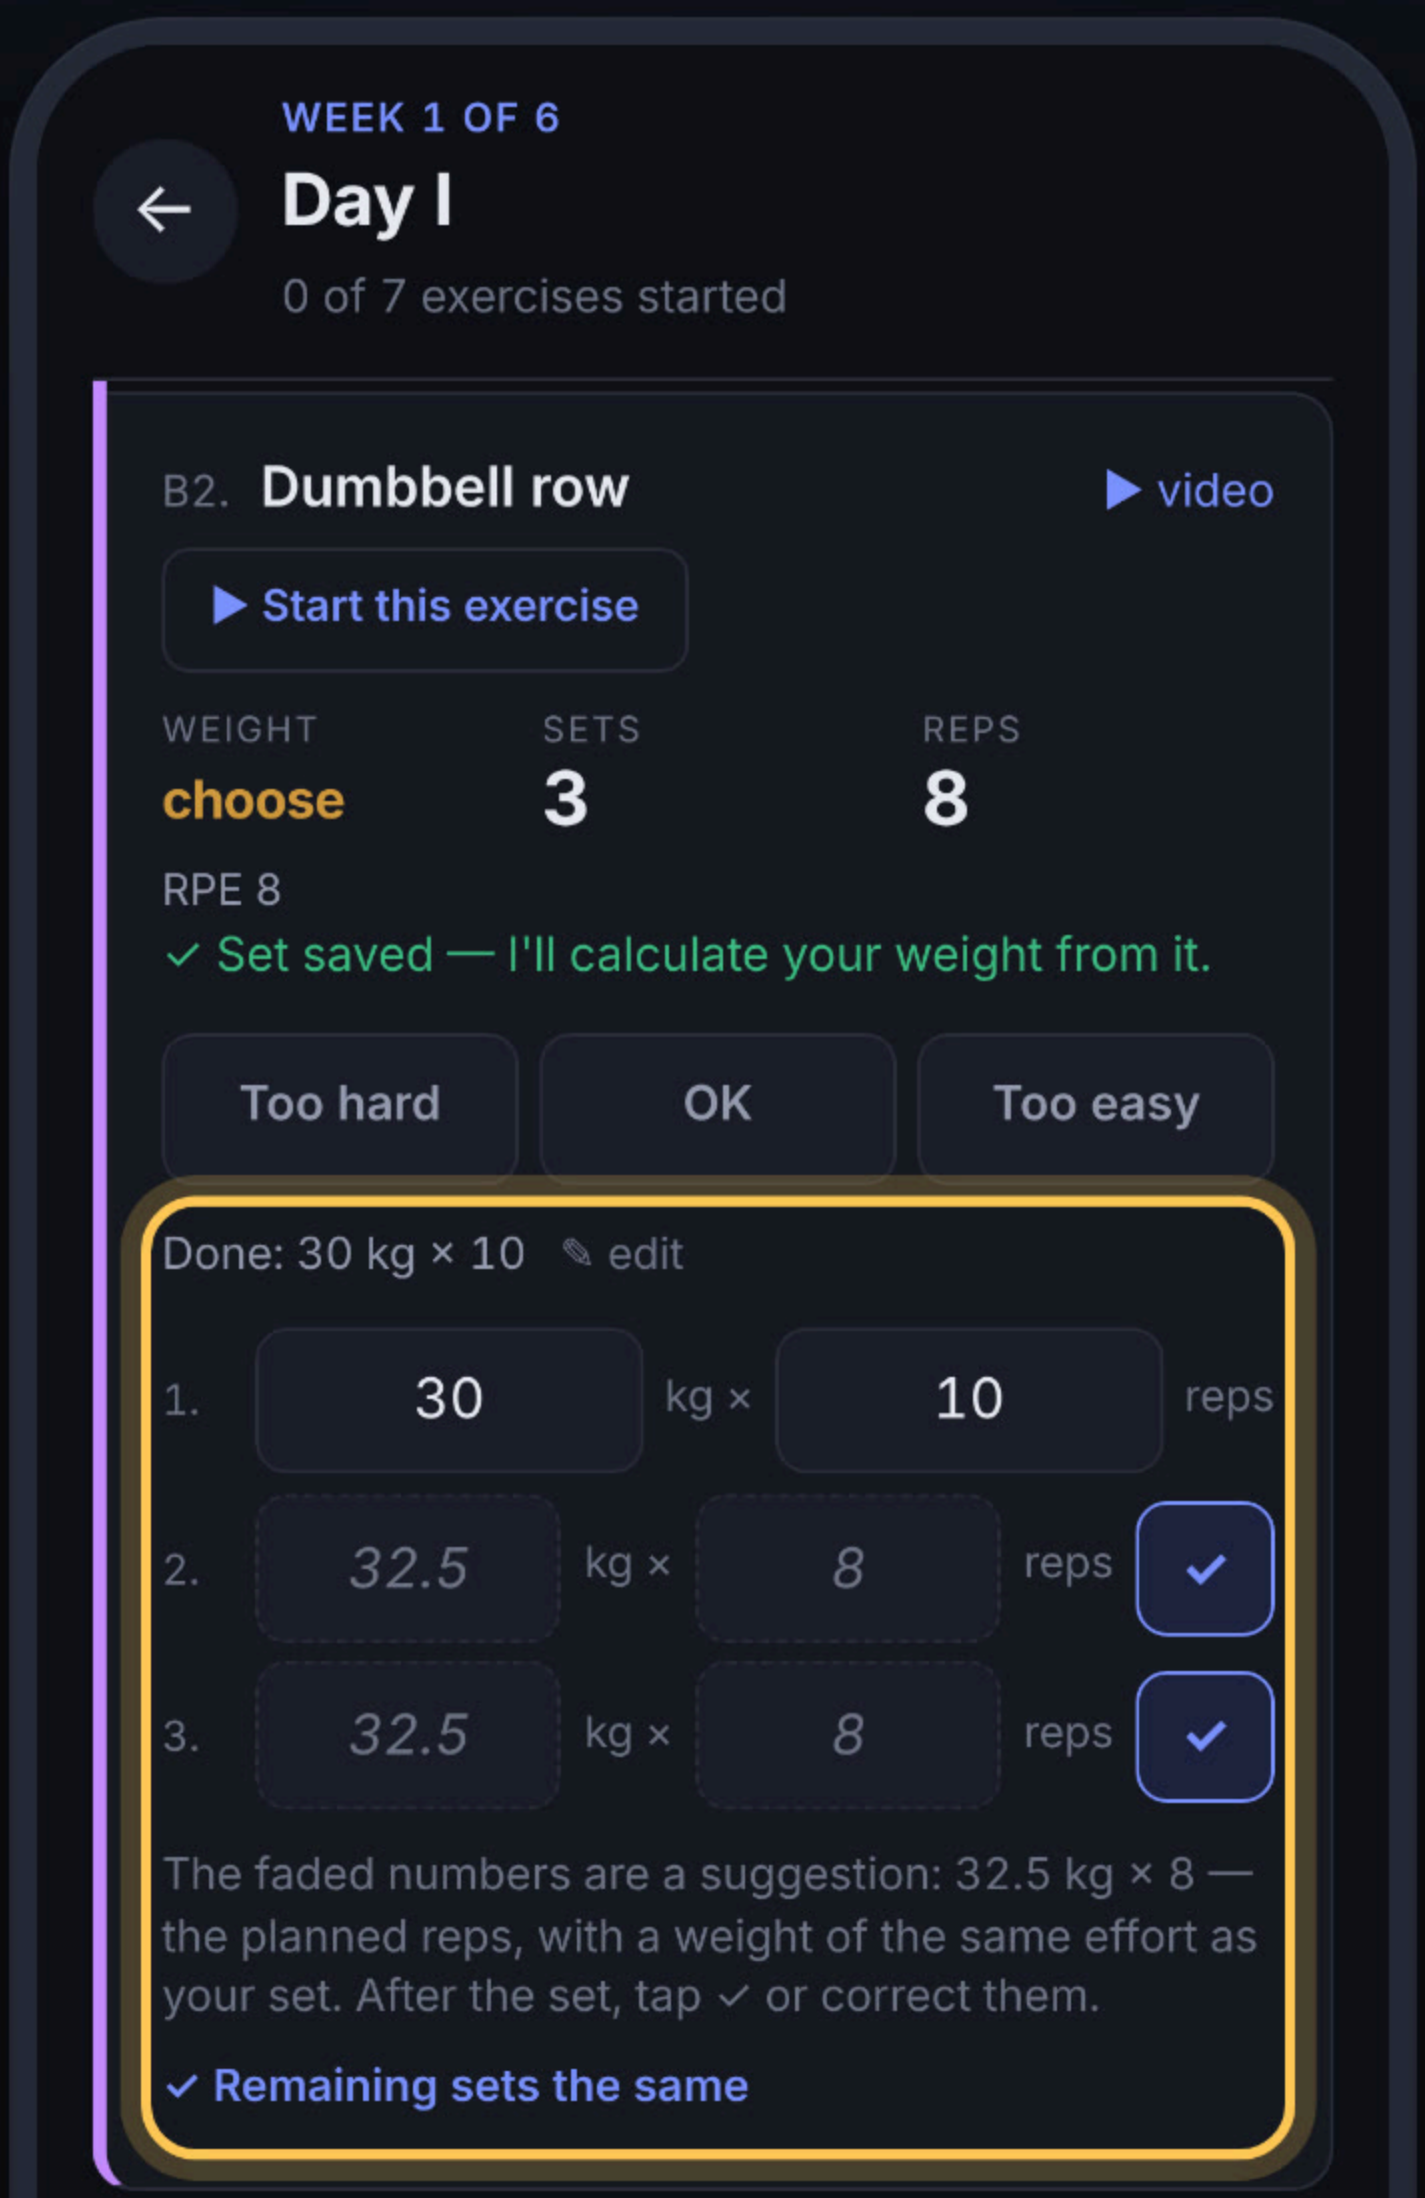

Training from the list

All of the day's exercises, each with a ▶ technique video. B1 and B2 are a superset — you alternate them.

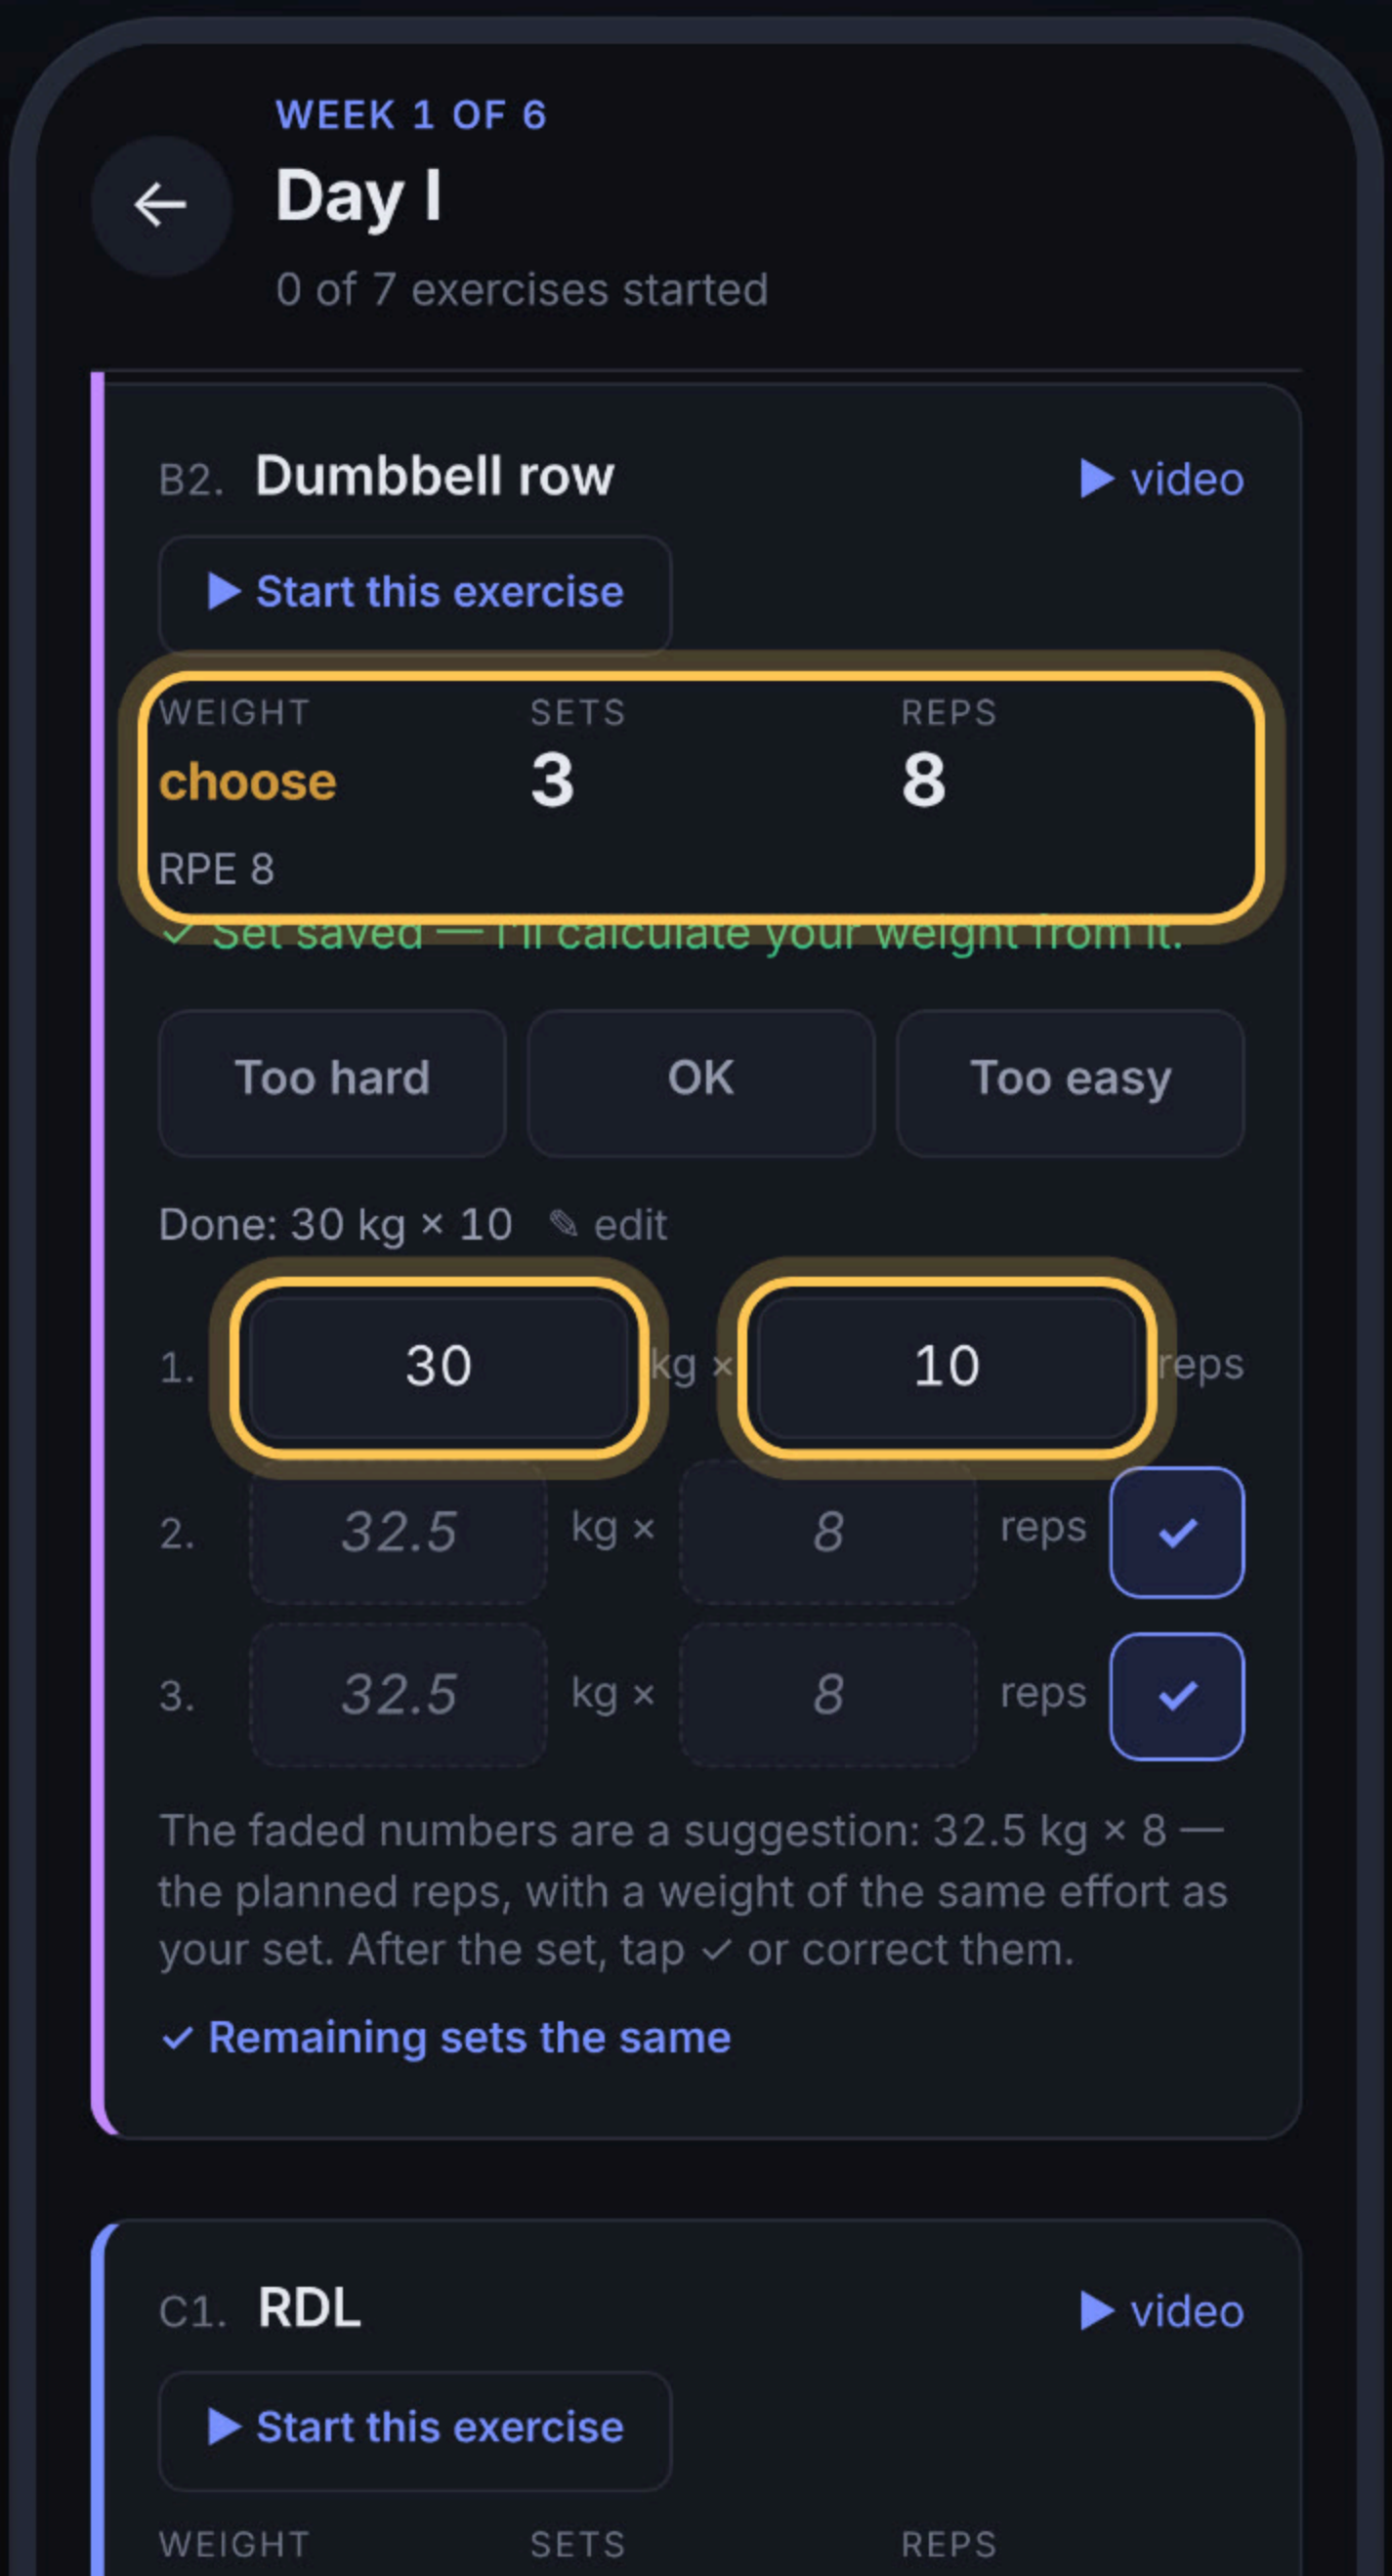

Log your set

Different weight than planned? Enter it — the app will recalculate the rest of the plan from that set.

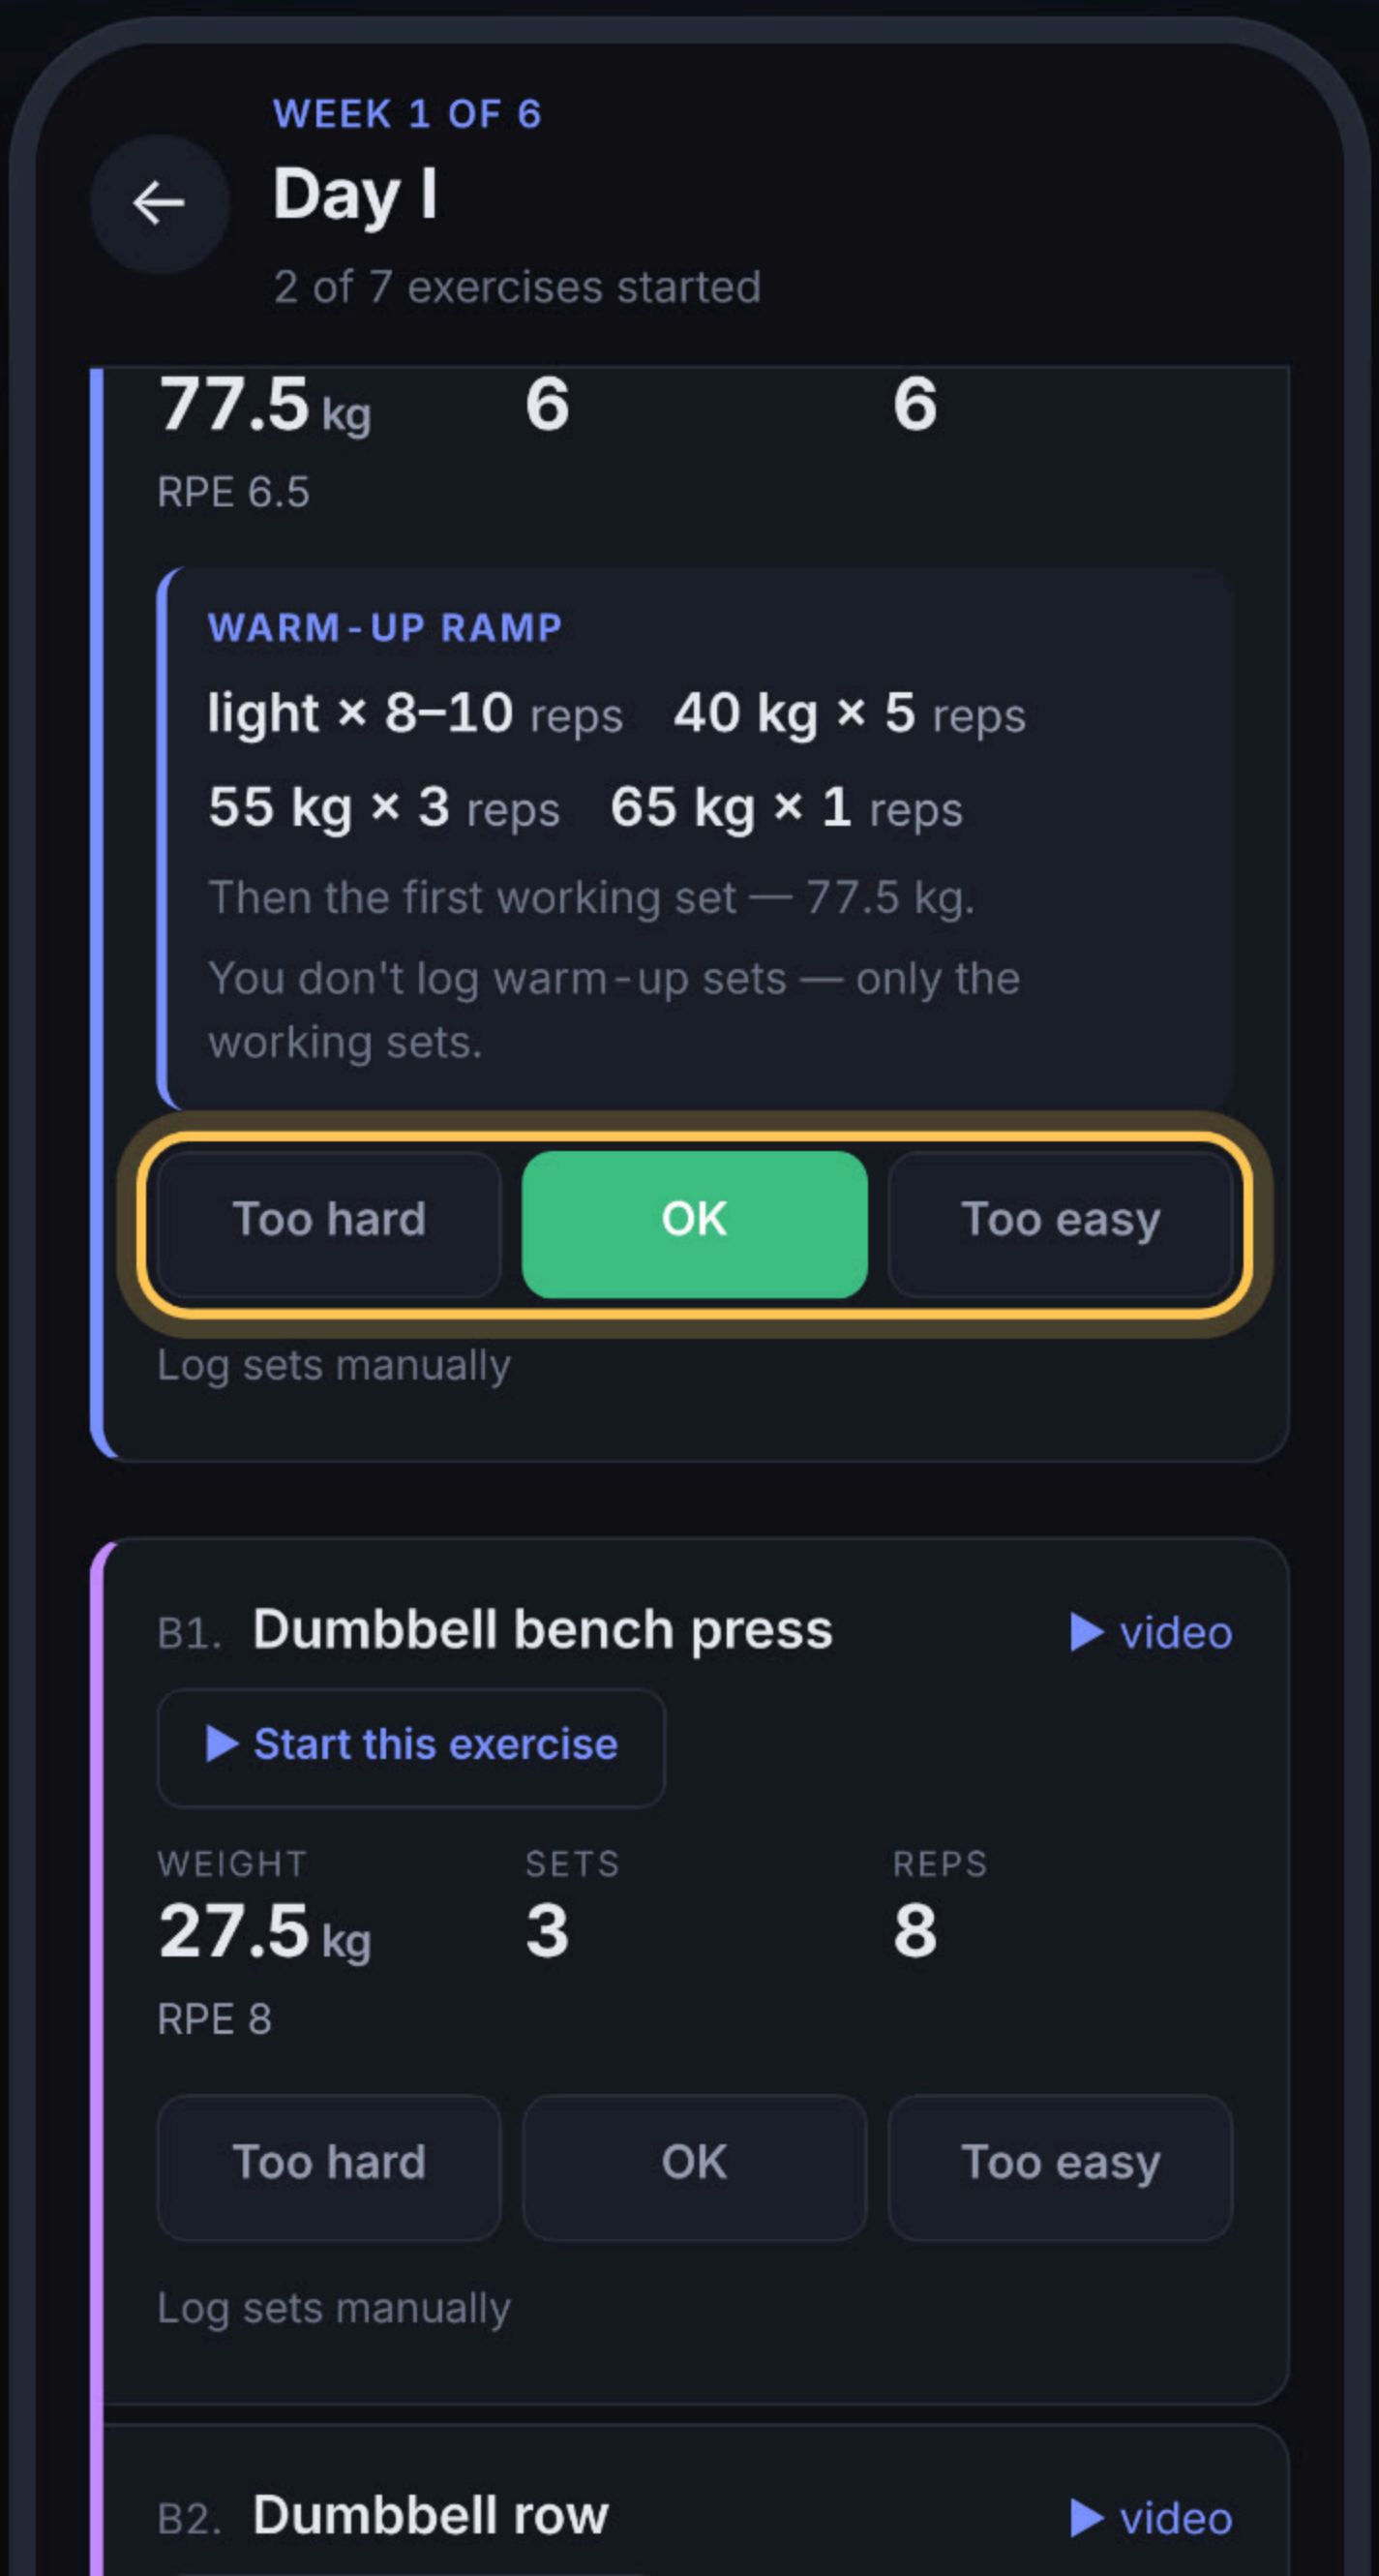

Choosing the weight? Reps aren't fixed

Plan: 8 reps at RPE 8. Got 10 and still had 2 in reserve? Enter 10 — the weights for the rest of the plan go up.

Rate the exercise

Too hard — it gets lighter. Too easy — heavier.
Exercises without a rating are saved as OK.

Or: set by set

“▶ Guide me” shows one set at a time: weight, reps and warm-up.

WEEK 1 OF 6

Day I

Set 1 of 24 · done 0

A1. **Barbell back squat** ▶ video

SET	WEIGHT	REPS
1 of 6	77.5 kg	6

RPE 6.5

WARM-UP RAMP

light × 8–10 reps **40 kg × 5** reps

55 kg × 3 reps **65 kg × 1** reps

Then the first working set — 77.5 kg.

You don't log warm-up sets — only the working sets.

77.5 kg × 6 reps

Lifted a different weight? Enter it — I'll calculate the rest of the plan from this set. Don't want to type it? The rating below is enough.

Too heavy or too light?

If it's OK — don't tap anything. If not, I'll adjust the next set and the weight in the coming weeks.

Too hard | Too easy

Finish set
